August 28 USB production

Prepared comparison aid - September 7, 2026. These are counts of retained files, not a count of records still owed. Software and ChatGPT assistance were used.

Set	Files examined	Recorded contents
Regulatory	1,161	1,108 MSG; 50 PDF; 2 DOCX; 1 OFT
DTRG	326	326 MSG; 251 distinct message identifiers
Total	1,487	All 1,487 matched the original USB copies byte for byte.

What was compared

The original USB was compared with the desktop copy made August 28. Two later analysis files and a system file in the desktop folder were excluded. A matching fingerprint means the compared bytes match; it does not certify the completeness of the City search.

File dates

The original USB file creation dates are August 28. The regulatory set has 840 outer modification dates on March 25, 318 on April 1 and three on August 26. Of the DTRG files, 325 share a March 7 modification-date cluster.

A file date may describe copying, exporting or packaging. These dates alone do not establish when the City first obtained a record, when it first disclosed it, who performed an action, or whether records were deleted.

Source: retained original-USB comparison, preserved desktop production and AD current notes. Originals remain available; no source file was altered for this page.
