Comments
Code department was made aware on Sunday the refrigeration lines from the wall on salad produce to the cheese deli section were out of order. Upon complaint inspection, AP Coach Logan Tice informed me that refrigeration line breaker flipped and there was a leak in the line which required the maintenance technician to fix. Logan informed me that the plastic coverings for a refrigeration units were placed on top of the items and he had workers on stand by informing and preventing customers from buying produce items for safety concerns. All items were kept under 41f degrees and the only item that were removed were the lettuce salad section. Walmart took measures to fix the error and safely prevented produce from being sold under hazardous temperatures. All temperatures for the refrigeration units were checked today and under compliance. See photos below.
