You don't often get email from [redacted] Learn why this is important

Caution: This email originated from outside EPA, please exercise additional caution when deciding whether to open attachments or click on provided links.

Good morning,

As a follow-up to my recent communication (#333810) regarding the unpermitted roof tear-off at Walmart Store #131 in Mt. Pleasant, Texas, I wanted to provide a brief update.

Although I have not observed active roof work at the site since last Wednesday, I visited the store again today (July 7, 2025) and noticed a large tote placed in the Women's Apparel section near the Grocery side of the store to collect water leaking from the roof.

While roof activity appears to have paused, this new interior water intrusion raises concern that exposed roofing components—possibly including suspect materials not surveyed or properly sealed—remain subject to rain or other environmental exposure. I have attached a photo of the documented leak from today. This update is submitted in good faith and in the interest of ensuring that any unresolved environmental or public exposure risks are properly documented.

Please feel free to contact me if you require any additional information to assist with your review.

With gratitude,

Kyle Moring
