Reading limits

The provider timezone is not stated in these rows. The timeline uses a provisional UTC-to-Central conversion, producing 2:19:48 through 2:27:07 p.m.; that conversion is not independent clock calibration. Durations are retained as printed (the call analysis treats them as seconds). The rows overlap and do not establish four separate conversations, who participated, what was discussed, or any sequence relative to a City email. Official City numbers are retained. This selection does not publish or clear the rest of the workbook.
