Archived video screenshots labelled August 5

SELECTION

Two original screenshot plates, U-3 and U-4, reproduced as records of the submitter's saved exhibit. Their Photos-app date headers and original captions are retained.

SOURCE CHECK

The original binder checksum is verified. The separately named screenshot files and underlying videos were not located in the reviewed folders. The dates and event descriptions are therefore source assertions, not independently verified capture facts.

DATES

The visible Photos headers label the recordings August 5, 2025, around 8:02 and 8:03 a.m. The captions identify screenshot creation on August 19, 2026. These are different events and dates.

LIMITS

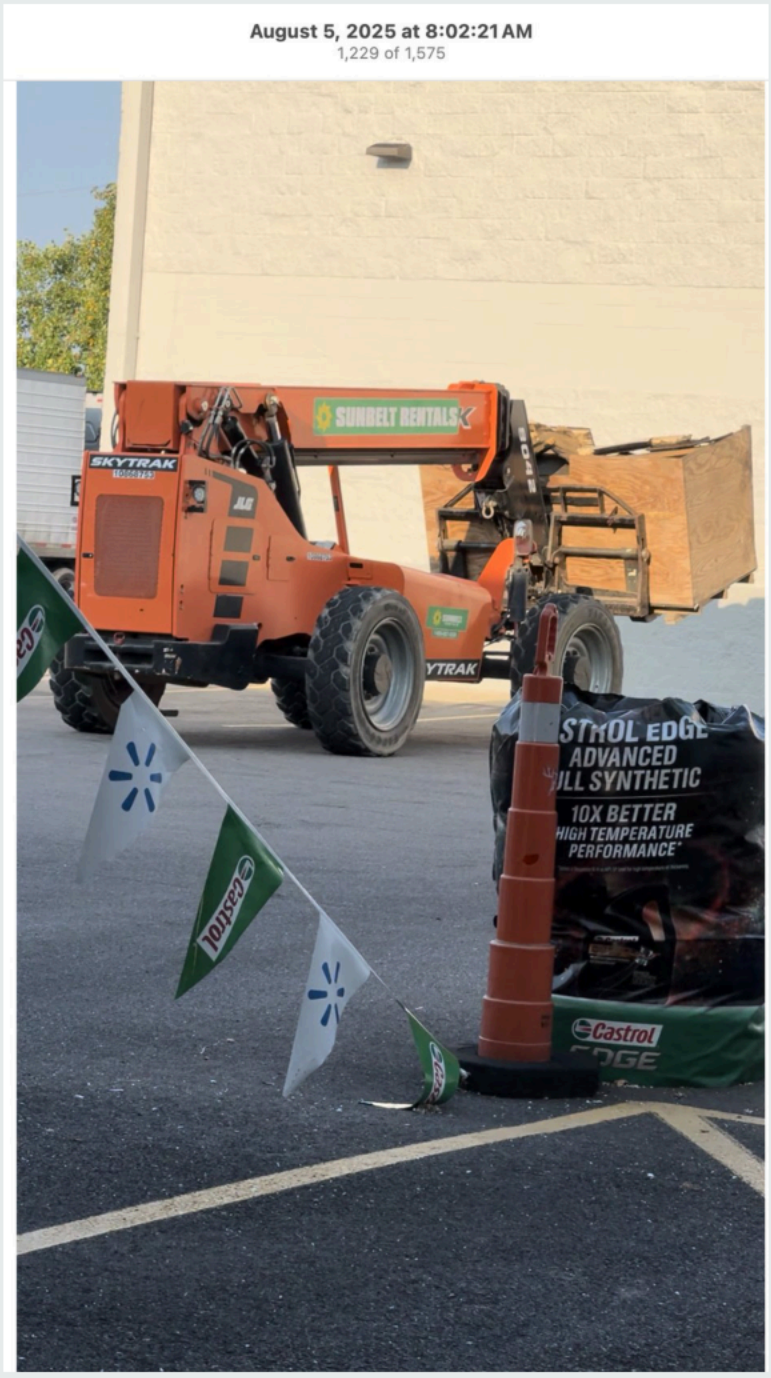

These are copies of archived screenshots, not native video exports. They show equipment near the building; they do not independently prove material composition, a release, or the full sequence of activity.

LATER AGENCY EXPLANATION

DSHS's September 3, 2026 response reports that asbestos-positive flashing was outside the then-current work area. DSHS issued the survey-related NOV and said the evidence did not establish that previously removed material contained asbestos or supported a notification violation. These limits accompany the earlier allegations.

Source binder: EPA-RAW-b988df5d; PDF pages 108, 109.

Original page labels retained. The complete binder and unselected media remain outside this copy.

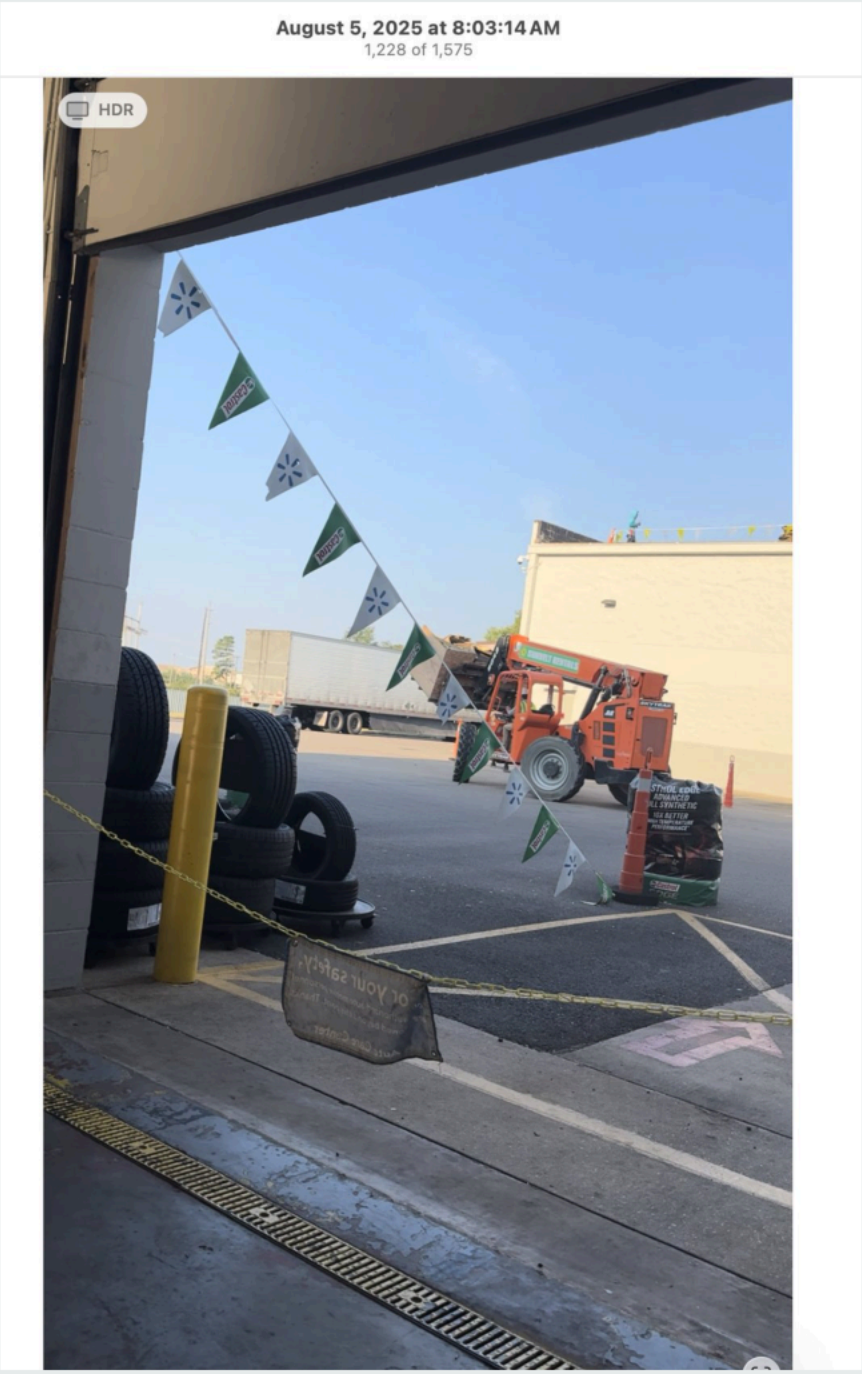

U-3 Video still — underlying item recorded August 5, 2025 · Screenshot 2026-08-19 at 2.29.22 PM.png

Still captured from an original video retained by the submitter. The photo-library header records the underlying item's capture date and time as August 5, 2025 at 8:02:21 AM (library item 1,229 of 1,575). A telehandler carrying a load is positioned in the customer parking area beside merchandise displays and store pennant flagging.

The screenshot file itself was created August 19, 2026. That file-creation date is not the date of the activity shown. The original video is available to EPA on request.

Photograph reproduced without alteration. Native file retained; SHA-256 listed in the photo log at binder pp. 94-95.

U-4 Video still — underlying item recorded August 5, 2025 · Screenshot 2026-08-19 at 2.28.42 PM.png

Still captured from an original video retained by the submitter. The photo-library header records the underlying item's capture date and time as August 5, 2025 at 8:03:14 AM (library item 1,228 of 1,575). View through an open overhead door showing a telehandler and a semi-trailer on the exterior apron adjacent to a tire display area.

The screenshot file itself was created August 19, 2026. That file-creation date is not the date of the activity shown. The original video is available to EPA on request.

Photograph reproduced without alteration. Native file retained; SHA-256 listed in the photo log at binder pp. 94-95.
