# Additional refrigeration equipment photographs

**SOURCE**

August 20, 2025 supplemental EPA submission; original PDF pages 4, 11, 19 and 37.

**WHAT IS INCLUDED**

Four additional equipment views: an overview, manufacturer labels, an interior component view and a close-up of foam and adhesive residue. These supplement the earlier MB01 selection.

**LIMITS**

The binder places these photographs in the submission, but it does not establish their exact capture dates. Appearance alone does not identify the material composition, establish a refrigerant release or prove a regulatory violation.

**TREATMENT**

Source page layout and visible image pixels are preserved. Embedded image metadata, PDF metadata, links and annotations have been removed. No visible-content redaction was needed for these four pages.

**SELECTION SCOPE**

These selected pages supplement MB01. The complete binder and other materials remain outside this copy.

Editorial context note. Original selected pages follow.
